SPOT SERIES

斑点系列

Spots are a unique material that not only embodies the wonders of nature and human wisdom, but also symbolizes steadfastness, persistence, and unshakable strength. It carries the storms of time and the ups and downs of life, and is the accumulation of time and life. Under the polishing of time, it is gradually eroded and smoothed out until its essential beauty is revealed. It is like a mirror, reflecting the sincerity and kindness of the human heart, and also like a sharp sword, piercing through the vanity and falsehood of the world. Reminder that we all gradually mature through the grinding of time, eventually grinding away the edges and becoming more rounded and smooth.

FEATURES

SANDSTONE SERIES

砂岩系列

Sandstone is a high-quality natural stone material that is free from light pollution and radiation, and has no radiation damage to the human body. It is moisture-proof, non slip, sound- absorbing, light absorbing, odorless, radiation free, non fading, warm in winter and cool in summer, warm and elegant; Compared to wood, it does not crack, deform, rot, or fade, and can perform excellently in both exterior walls and doors of buildings. The hardness of sandstone is relatively low compared to marble and granite, but this is not its disadvantage because the lower hardness allows people to better transform the appearance of sandstone . In addition to sandstone reliefs and sandstone anomalies, various life like lowers, plants, trees, and rare animals have appeared on sandstone .
